## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species of the claimed invention: All of the species contain at least 4 layers, those layers being a substrate layer, a first underlayer on the substrate layer, a second underlayer on the first underlayer, and a magnetic recording layer on the 2nd underlayer. In all cases the substrate layer is a non-magnetic material. However, with respect to the 1st and 2nd underlayers and the magnetic recording layer, the applicant has presented several distinct species. For example, the first underlayer can be an Fe based, Co based, or Ru based alloy, or can be an alloy containing Ti, Cr, or V. The 2nd underlayer can be an Ru based or Co based alloy, and the magnetic recording layer can be a single Co based alloy layer, or can be a multilayer stack comprising alternating Co based alloy layers with Ru based alloy layers. In addition, the applicant also presents species wherein a soft magnetic underlayer (SUL) is present between the 1st underlayer and the substrate layer, wherein the substrate, 1st underlayer, 2nd underlayer, and magnetic recording layer are any of the materials discussed above.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. A single specie will consist of a specific layer construction with a **single** chemical element or alloy of each layer defined, for example: "A first underlayer formed on the non magnetic substrate, said first underlayer containing Fe as a main component and a combination of Zr and N as an auxiliary component; a second

Art Unit: 1773

underlayer on the first underlayer, said second underlayer containing Ru as a main component; and a magnetic recording layer formed on the second underlayer, said magnetic recording layer containing Co as a main component and Pt and O as auxiliary components" is acceptable.

Currently no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. A telephone call was made to Glenn Perry on 10/28/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
